***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Hayashi (US. 2001/0054074).
3. Examiner noted that claims 1-17 recited a method apparatus and program for utilizing an electronic messaging system for delivering media object, by sending an address or location of the object, for the message recipient, to retrieve said object. Although, the claims were presented in various forms, but they are not distinct from convention electronic mail and attachment, which were used to send media object separately from the e-mail in order to minimized network bandwidth utilization. In addition, there are several analogous arts, which are applicable for statutory rejection, specially, Hayashi, which clearly teaches a method, apparatus and computer program (hereinafter collectively referred to as a system), for communicating electronic message and media component, from e-mail server or e-mail server having vocal capability, e.g., voice mail server. By using character code, i.e., reference, the system allows its recipients to retrieve and utilize the attached media object, in real time. Further the message and media reference are stored separately from media components (Fig. 1-3, 6-7, 9-12; paragraphs 3, 8-11, 37, 50-53, 62 and 71).
